

## Iohexol Immunoassay Kit Glomerular Filtration Rate (FIT-GFR™) for Research Studies

BioPAL's iohexol immunoassay kits provide a superior analytical method to measure iohexol for determining glomerular filtration rate (GFR). This iohexol test uses immunoassay to overcome the major limitations associated with current analytical technology to measure iohexol. For GFR studies, the kit supports both the UV/P and the blood clearance protocols for generating a GFR value. Depending on the protocol chosen, the kit can support up to 15 GFR measurements. The kit does not contain the filtration marker. If the study involves basic research subjects, such as rats, the researcher will need to purchase RenalRATE™ Iohexol. However, if the study involves clinical research subjects, the researcher MUST obtain clinical-grade iohexol (Omnipaque®) from their pharmacy. Recommended dosage can be found in the GFR Instructional Manual.
