

15 µm MICROSPHERES FOR BLOOD FLOW STUDIES

BioPAL's **STERIspheres**TM are nonradioactive and provide a superior alternative to the use of radioactive and optical microspheres for measuring regional organ blood flow and particle deposition. This product line offers several advantages, including **STERIspheres** are formulated with reduced Tween® 80 and are autoclaved. **STERIspheres**' high sensitivity makes them particularly useful for both general applications and in measuring low flow states or low flow organs, such as the skin and skeletal muscle. Ten marker labels are available with additional labels upon request. **STERIspheres** are packaged at a concentration of 2.5 million per ml (15 µm spheres). The spheres are available in 10 ml and 20 ml vials, and are provided autoclaved. **STERIspheres** are covered by patent 6,328,700, plus foreign patents issued and pending.

STERIspheres - 10 ml Vials

Each vial contains approximately 2.5 million spheres per ml (25 million per vial). The microspheres are 15 µm in diameter and are suspended in saline containing 0.01% Tween 80 and 0.01% Thimerosal. We recommend using **STERIspheres** in the following order: Gold, Samarium, Lutetium, Lanthanum, Ytterbium, Europium, Terbium, Holmium, Scandium, Antimony. Customers are encouraged to contact BioPAL for more information concerning label sensitivity and order of use.

Catalog

Number

C-15A10	Samarium STERIspheres \$ 225.00 15 µm in diameter, dyed blackberry and packaged in a 10 ml sealed serum bottle.
C-15B10	Lanthanum STERIspheres \$ 225.00 15 µm in diameter, dyed blueberry and packaged in a 10 ml sealed serum bottle.
C-15C10	Antimony STERIspheres \$ 225.00 15 µm in diameter, dyed violet and packaged in a 10 ml sealed serum bottle.
C-15D10	Ytterbium STERIspheres \$ 225.00 15 µm in diameter, dyed kiwi and packaged in a 10 ml sealed serum bottle.
C-15E10	Lutetium STERIspheres \$ 225.00 15 µm in diameter, dyed plum and packaged in a 10 ml sealed serum bottle.
C-15H10	Gold STERIspheres \$ 225.00 15 µm in diameter, dyed raspberry and packaged in a 10 ml sealed serum bottle.
C-15J10	Scandium STERIspheres \$ 225.00 15 µm in diameter, dyed straw and packaged in a 10 ml sealed serum bottle.
C-15K10	Europium STERIspheres \$ 225.00 15 µm in diameter, dyed orange and packaged in a 10 ml sealed serum bottle.
C-15L10	Holmium STERIspheres \$ 225.00 15 µm in diameter, dyed peach and packaged in a 10 ml sealed serum bottle.
C-15N10	Terbium STERIspheres \$ 225.00 15 µm in diameter, dyed lemon and packaged in a 10 ml sealed serum bottle.

The spheres are available in 10 ml and 20 ml vials, and are provided autoclaved. **STERIspheres** are covered by patent 6,328,700, plus foreign patents issued and pending.

STERIspheres - 20 ml Vials

Each vial contains approximately 2.5 million spheres per ml (50 million per vial). The microspheres are 15 µm in diameter and are suspended in saline containing 0.01% Tween 80 and 0.01% Thimerosal. We recommend using **STERIspheres** in the following order: Gold, Samarium, Lutetium, Lanthanum, Ytterbium, Europium, Terbium, Holmium, Scandium, Antimony. Customers are encouraged to contact BioPAL for more information concerning label sensitivity and order of use.
